

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the application:

1. (Currently amended) An internal substance delivery device for insertion into a body cavity, the device includes a support frame having at least two resilient arms which retain the device in the body cavity, wherein each resilient arm is capable of receiving and releasing a separate pod capable of releasing a substance drug contained within a matrix of the pod into the body cavity, and wherein the at least two resilient arms are biased outward from a central section of the support frame.
2. (Previously presented) The substance delivery device as claimed in claim 1, wherein the substance is a drug.
3. (Previously presented) The substance delivery device as claimed in either claim 1 or claim 2, wherein the device is an intra-vaginal release device.
4. (Previously presented) The substance delivery device as claimed in claim 3, wherein the substance is released from the pod through osmosis.
5. (Previously presented) The substance delivery device as claimed in claim 1, wherein the pod is rounded.

6. (Previously presented) The substance delivery device as claimed in claim 1, wherein at least one of the pods is flexibly attached to a corresponding arm.

7. (Previously presented) The substance delivery device as claimed in claim 6, wherein the at least one of the pods is attached to the corresponding arm by a ball and socket mechanism.

8. (Currently amended) The pod for attachment to a substance delivery device as claimed in claim 1, wherein the pod is capable of attaching to the substance delivery device.

9. (Previously presented) The substance delivery device as claimed in claim 1, wherein the support frame is in the form of a wish bone.

10. (Canceled)

11. (Previously presented) The substance delivery device as claimed in claim 9, wherein the support frame is made of nylon.

12. (Previously presented) The substance delivery device as claimed in either claim 9 or claim 11, wherein the at least two resilient arms are sufficiently pliable to be moved together to allow the substance delivery device to be effectively compressed.

13. (Previously presented) The substance delivery device as claimed in either claim 9 or claim 11, wherein the at least two resilient arms are capable of interlocking for removal or insertion.

14. (Previously presented) The substance delivery device as claimed in either claim 9 or claim 11, wherein the support frame includes a locator to enable the substance delivery device to be readily located and removed from *in situ*.

15-16. (Canceled)

17. (Previously presented) The substance delivery device as claimed in claim 12, wherein the at least two resilient arms are capable of interlocking for removal or insertion.

18. (Previously presented) The substance delivery device as claimed in claim 12, wherein the support frame includes a locator to enable the substance delivery device to be readily located and removed from *in situ*.

19. (Previously presented) The substance delivery device as claimed in claim 13, wherein the support frame includes a locator to enable the substance delivery device to be readily located and removed from *in situ*.

20. (New) The substance delivery device as claimed in claim 1, wherein the matrix is a cellulose matrix.
